

HOYT Sharkskin™ Screens

Hoyt Sharkskin™ is a truly unique screening media that combines all of the open area of woven wire cloth with the wear life of polyurethane. Sharkskin's proprietary design makes it extremely light, flexible and easy to install. It is an extremely cost-effective screening solution for a wide variety of difficult applications! Ask your Hoyt representative for an analysis to see if Sharkskin™ is right for your operation!

Improved Wear Life

In many screening situations, Sharkskin™ will outlast woven wire cloth by a ratio of between 2:1 to 10:1.

Maintains Open Area and Production

Sharkskin™ open area is identical to woven wire cloth of the same wire diameter. Unlike traditional tensioned or modular polyurethane media, no open area or production is lost. It is ideally suited for smaller decks where open area loss does not allow the use of modular screen media.

Easier and Less Time Consuming to Install

Sharkskin™ is not a rigid screening media. It can be rolled up and carried, in most cases, by one worker. Once in the screen deck, it is unrolled and tensioned in.

Anti-Plugging

Sharkskin™ may reduce near-size plugging in materials that fracture as "F&E" (flats and elongated).

Noise Abatement

As with all synthetic screening media, Sharkskin™ is quieter than traditional woven wire or perforated plate screen media.

Reduced Weight

Sharkskin™ is considerably lighter than virtually any other screen media type, reducing the load on the vibrating shaker.

Consult your Hoyt representative for an evaluation to see if Sharkskin™ is right for your screening application.
