

# HOYT Hy-Pro Square

A hybrid of crimped and straight wires

- Uses straight wires and crimped wires alternately to tumble and stratify the material more rapidly than a panel without those variations
- Unique product that can aid in preventing blinding and plugging since fill crimps allow straight wires to move slightly
- Square openings still give you optimum open area, but allow the material to tumble more aggressively than a standard panel can produce
- A combination of straight and crimped wires allows for different harmonics due to differently shaped wire while still providing accurate sizing
