

HOYT V-1

For high moisture applications

- Often used in place of “harp wire,” these panels are for extreme non-blinding applications, where sizing is not a priority
- HOYT has the ability to pour polyurethane strips over bindings to prolong wearlife of the binding wires, as well as help keep tight to the deck
- Can adjust slot openings and direction, to accommodate your specific application and needs
- Excellent for topsoil and de-sanding, not for precise screening. Very efficient in high moisture applications
