Why Use Hoyt High Performance Modular Series

1. Many customers are disappointed with the open area and production that their modular polyurethane systems provide.
2. Some customers need to make short-run, special products on their modular polyurethane systems, but do not wish to purchase costly panels that may never be used again.

What are the Advantages of the Hoyt High Performance Modular Series

1. The shaker deck remains flat and efficient, unlike competitive systems that require the camber to be put back into the deck to accommodate tensioned wire cloth.
2. Most types of woven screen media can be inserted into the Hoyt High Performance Modular Series. Different screen types can be used in higher wear areas. Change out time is reduced.
3. Multiple openings can be used on the same deck, offering the opportunity to make small gradation changes. You can "dial in" specifications to exactly meet customer needs!
4. Small sections of high wear areas can be changed out rather than large sections. You change out only the areas that need it!
5. Panels are changed out literally in minutes rather than hours. Plant production time is increased!
6. Panels to fit the Hoyt High Performance Modular Series take up little inventory space, and ship easily.
7. Hoyt High Performance Modular Series panels are small, light and easy to carry to the job site. Personnel love them!
